Axpe Consulting achieved TMMI Level 3.

January 24, 2013- Last updated on January 31, 2013

AXPE Consulting has achieved level 3 TMMI, a certification awarded by the TMMI Foundation. This is a non-profit organization, founded by a group of leading European professionals, dedicated to improve software test and quality-related processes.

The foundation owns and supports the model of TMMI. Thus provides independent accreditation service lead assessors and advisors, as well as the structure to establish evaluation methods.

Despite the fact that software testing costs at least 30 or 40% of the project, it is given little attention to it in the various process improvement models such as CMMI. However, TMMI provides a broader and structured approach to structured testing process.

The internal structure of TMMI contains practices that can be learned and applied systematically to support quality improvement gradually. There are 5 levels that define the maturity hierarchy and evolution path to the test process improvements.

Level 3 indicates that the processes are defined and being used at the same way for all test projects of the organization.

According to Experimentus, the company responsible for certificate Axpe at TMMI Level 3:

"This is an extraordinary achievement and deserved. AXPE Consulting is at the forefront of IT service providers in the testing and certification of their ability to manage software quality. Every time there is a greater recognition by IT service providers in the management of software quality and testing capacity against TMMI model, not only providing an independent validation for their clients, but also a competitive advantage in the market. "

Experimentus has provided to the company an intelligent test method (ITM), which includes templates, tools and processes compatible with TMMI 3. This method was key to reducing the time and cost when getting certified.

Moreover they add, *"this is a commitment to provide quality and value to customers' operations AXPE Consulting, which sends a strong message of competitive differentiation."*
