

Press Release

First IT Services organisation worldwide to achieve TMMi Certification

Experimentus certifies Métodos y Tecnología (MTP) test capability against the Test Maturity Model integrated (TMMi) which is owned by the non-profit making TMMi Foundation, making them the first IT Services organisation worldwide to achieve this distinction.

17th January 2010 - London: Experimentus, the software quality management firm announce the certification of MTP, based in Spain, to TMMi level 3, making them the first IT Services organisation worldwide to achieve this accreditation.

TMMi is the industry standard against which organisations can measure and improve software Testing and Quality related processes and activities.

With clients who include many of Europe's largest telecoms and insurance organisations, Juan Ferrer the Managing Director of MTP says "This is part of our ongoing commitment to our clients to ensure that we are in the best position to deliver quality results to our clients. TMMi certification not only confirms the status of our capability, but also enables us to clearly demonstrate how our Testing Services have a competitive edge within the Global Testing Market."

Experimentus, accredited by the TMMi Foundation for both its assessment method and consultants, has obtained global recognition for the work it has conducted with the TMMi model, helping organisations achieve quality software deliveries through the implementation of appropriate practices to enable defect detection and for the more mature organisations defect prevention.

Julian Clarke, Director of Sales & Marketing at Experimentus said, "Many organisations have used TMMi to independently measure and identify improvements in their own test and quality capabilities but more recently we have seen TMMi become part of the evaluation criteria when selecting a supplier. MTP's achievement is a significant step forward in the challenge to provide independent validation and verification. With other similar organisations currently being assessed for certification, we expect this to be the first of many certifications in the coming year."

Commenting on the Testing Industry, Martin Adcock, Managing Director of Experimentus says "With ISTQB to accredit people, TMMi to assess and certify process capability and tool vendors relaxing their licensing, the industry is beginning to transform itself from 'body shop' based suppliers to those delivering industrialised solutions that are both competitively priced and deliver quality outcomes".

About Experimentus: (www.experimentus.com)

Experimentus is an IT solutions provider and services company that specialises in software quality management. The range of solutions it provides helps organisations to reduce the risks associated with the software development lifecycle and enables organisations to better manage, control and measure existing IT application's quality.

About MTP: (www.mtp.es)

MTP is a Spanish company focused in specialised testing and Software Quality Assurance activities. Has more than 15 years of experience in Software Engineering and Quality. MTP carries out large projects around the world through their certified TMMi level 3 testing factories. MTP is founder member of the Spanish Testing Board, and training provider of specialised testing courses by ISQTB, MTP is accredited by German Testing Board for TTCN3 Certification training.

About the TMMi Foundation: (www.tmmifoundation.org)

The TMMi Foundation is a non-profit making organisation, founded by a number of leading European test and quality practitioners and is dedicated to improving software test and quality related processes and practices. The Foundation owns and supports the TMMi model, provides an independent accrediting service for lead assessors and assessors, along with the structure to accredit assessment methods.
