

ISTQB Advanced Security Tester - 4 Days includes exam

About the Course

With the ever-increasing numbers of security breaches, both human and machine-based, significantly more understanding is required from testers to ensure that the proper quality assurance measures are in place for assuring the security of IT systems.

This intensive four-day course contains lectures, exercises and practical work to describe and illustrate best practices in security testing.

Who is it for?

The ISTQB Advanced Security course is for Technical Testers, Security Testers, Security Co-ordinators and Managers, plus testers and test managers who are serious about including security aspects into their test plans or who want to specialise.

Entry Requirements

- A Certificate at ISTQB Foundation level must have been awarded for candidates to sit this course
- It is recommended that candidates have at least three-years testing experience before attempting the course and exam.

The Exam

To qualify as an internationally-recognized Certified Advanced Level Security Tester and be issued with an ISTQB® Advanced Level Certificate, delegates must successfully pass the exam administered by the relevant [National Board](#) or Examination Provider.

The 2-hour exam contains 45 questions, of which 60% must be answered correctly for a pass to and certificate to be awarded.

If English is not your first language, please advise us so that we can apply for an additional 30-minutes of exam time for you.
