David Consulting Group Partners with Experimentus to Provide TMMi® Services

May 14, 2013

David Consulting Group now offers Test Maturity Model Integration (TMMi®) training, implementation and appraisals in North America.

PRLog (Press Release) - May 14, 2013 - MALVERN, -- Malvern, PA – David Consulting Group (<http://www.davidconsultinggroup.com>), the premier global provider of Application Development & Maintenance (ADM) support solutions for software optimization, is now a provider of Test Maturity Model Integration (TMMi) services in North America.

TMMi is the independent industry standard measure against which to assess software quality management and test processes within an organization. The result helps to identify hidden costs in the software development lifecycle (SDLC), moving an organization from defect detection to defect prevention, while also increasing quality and reducing cost/time for deliveries.

Managed by the TMMi Foundation (<http://www.tmmi.org>), the TMMi model ensures that integrated and appropriate processes are implemented in stages in order to help an organization to become fully measured and optimized.

“Testing and software quality management form a significant cost of any project (up to 60 to 70 percent), so the impact of an industrialized, integrated approach results in significant savings in time and cost, while also reducing risks and improving quality,” said Mike Harris, CEO of David Consulting Group. “The TMMi model is proven to be effective in many industries and organizations around the world, delivering a clear return on investment and enhanced reputations. We look forward to continuing this in North America.”

“With the significant contributions that TMMi is having in many organizations worldwide, it is not surprising that there is a continuous global trend to use TMMi as the independent “go-to” model. I am therefore delighted that DCG will be using the Experimentus TMMi Foundation accredited Assessment Method to support and expand their solutions for delivering software optimization,” said Martin Adcock, Managing Director of Experimentus. “The model helps to ensure that testing and software quality management becomes a consistent and reliable practice in an organization, while improving productivity and overall effectiveness.”

TMMi is complementary to the CMMI framework. David Consulting Group also provides CMMI services (<http://www.davidconsultinggroup.com/solutions/adm-consult...>) and training courses (<http://davidconsultinggroup.com/services/training/introdu...>).

Contact Tony Timbol (<mailto:t.timbol@davidconsultinggroup.com>) at 610-644-2856 with any questions or to learn more about TMMi or any other DCG offerings.

About David Consulting Group: (www.davidconsultinggroup.com)

DCG is the premier global provider of Application Development & Maintenance (ADM) support solutions for software optimization, proven to improve software productivity, quality and time-to-market and addressing immediate and long-term opportunities for clients. Since 1994, companies of all sizes who depend on their software have relied on DCG to meet their standards and deliver valuable improvements at the right price. DCG maintains a U.S. corporate office in Malvern, PA, and a European corporate office, DCG-SMS, in Blackpool, UK.

About Experimentus: (www.experimentus.com)

Experimentus is an IT solutions provider and services company that specialises in software quality management. The range of solutions it provides helps organisations to reduce the risks associated with the software development lifecycle and enables organisations to better manage, control and measure existing IT application's quality.

About the TMMi@ Foundation: (www.tmmifoundation.org)

The TMMi Foundation is a non-profit making organisation, founded by a number of leading test and quality practitioners and is dedicated to improving software test and quality-related processes and practices. The Foundation owns and supports the TMMi model and provides an independent accrediting service for lead assessors and assessors, along with the structure to accredit assessment methods
